PROFILE

Software Engineer II at Box and M.S. Candidate at Warsaw University of Technology. Completed an internship as a software engineer at Allegro and Bridgestone, focusing on Spring, Java, Kubernetes, and Kafka technologies. Currently developing large-scale real-time collaborative apps at Box. Interested in music in machine learning and finishing master thesis titled "Interventions in music generative models for conditioning with high-level domain traits". Achievements include participating in hackathons, winning 2nd place in Ensemble AI and 1st and 3rd place in the BEST Hacking League.

EXPERIENCE

Software Engineer II Box 07.2024-present

- Technologies: microservices, k8s, Spring Boot, Java, TypeScript, Redis, BigTable
- Work in a large-scale real-time content-creation products - interactive whiteboard, notes
- Implemented distributed scheduled notification system for mentions, integrated mermaid into notes, taking part in migration whole system from php to java

Software Engineer Intern Bridgestone Mobility Solutions 07.2023-07.2024

- Technologies: microservices, k8s, helm, Spring Boot, Java, Selenium, Kafka - DevOps team

Software Engineer Intern Allegro 07.2022-09.2022

- Technologies: microservices, distributed databases, Spring Boot, Java, Kotlin

SKILLS

Languages	Python, Java, TypeScript
Frameworks	Spring Boot, FastAPI, React, NodeJS, PyTorch
Technologies	Redis, Pubsub, K8s, Dataflow, PostgreSQL, BigTable, Kafka

EDUCATION

M.Sc. in Computer Science, WUT, Faculty of Electronics and Information Technology

Thesis: "Interventions in music generative models for conditioning with high-level domain traits"

February 2025 - present

B.Sc. in Computer Science, Warsaw University of Technology, Faculty of Electronics and Information Technology

Graduated with distinction with a GPA of 4.86/5.0.

Thesis: "Conditioning of Musical Generative Models"

October 2021 - 2025

ACHIEVEMENTS

- **Second place winner at Ensemble AI Hackathon 2024** Solving three tasks related to encoder theft techniques and exploring strategies for countering identity attacks. Used libraries: Pytorch, pandas, numpy, seaborn, matplotlib
- **First and third place winner at BEST Hacking League Hackathon 2024/2023** Development of a system for automatically generating meeting notes and recommendations for similar ones. Technologies used: Whisper, OpenAI, ChromaDB, FastAPI, React
